Rick Filas

“Greaseless” Operators

Effective immediately Nabco Entrances will be minimizing the grease used in all rebuilt GT300, 400, 500 & GT600 operators.

In an effort to continue improving our product we will be eliminating the white lithium grease that is used in these operators and will begin using a film of clear special synthetic grease applied directly to the gear surfaces only. This will have little affect on operator performance and should result in little or none of the oil seepage sometimes found around the output shaft on the operator.

The new “greaseless” operator can be identified by a pink sticker with the letters “GL” located on the underside of the operator. Refer to illustration at right.

Please note this applies to rebuilt operators only at this time.
