New Carrier Roller Design for GT1175 Sliding Doors

Carrier Rollers on the GT-1175 Automatic Sliding Door System have been redesigned for ease of assembly and field adjustment. This change affects all models of GT-1175 with the exception of telescopic models which use a smaller diameter roller assembly. The new rollers will be in production soon and are a direct replacement for rollers currently in use.

The hex head bolt, lock washer and nut on the old style roller have been replaced with an Allen head setscrew and serrated locknut as shown below.

To adjust the new rollers the following tools are required:

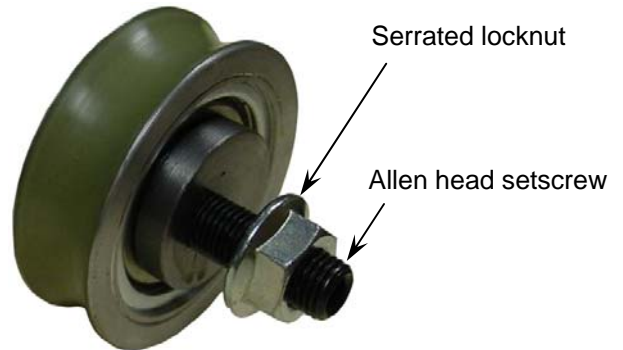

7/32" Allen wrench

11/16" Box end wrench

Old Style Roller

New Style Roller

Both the new and old rollers will have the same part number: 11-10733
