SERVICE PARTS: LEFT HAND FULL OPEN SIDELITE 11

SERVICE PARTS: SLIDE DOOR 14

SERVICE PARTS: RIGHT HAND SLIDE DOOR 15

SERVICE PARTS: LEFT HAND SLIDE DOOR 16

1 Install Frame

1. Go to the non-breakout side of rough opening. Place Header on a flat surface with the removable cover facing up.
2. Refer to the instruction sticker located on each Jamb Tube to properly orientate Jamb Tubes.
3. Remove Cover from Header. Remove Parts boxes and/or Parts bags from inside Header. Set aside.
4. Secure Frame to Rough Opening with 1/4 inch diameter anchors or 3/8 inch threaded rods, with a maximum 48 inches on center for the Header and Jamb Tubes (First anchor maximum is 36 inches from each end of the Header).

2 Install the Full Open Sidelite Panel

1. Center and butt the Bottom Pivot Assembly up against the inside, side of the Pivot Jamb Tube so the Bottom Bushing is on the Breakout side of opening.
2. With a 1/4 inch Masonry drill bit, drill through each screw hole at least 1-1/2 inches deep. Remove the Bottom Pivot.
3. Insert (1) #16 Hi-Red Anchor into each drilled hole. Replace the Bottom Pivot.
4. Permanently secure the Bottom Pivot to the Floor by screwing (1) #14 x 1-1/2 inch Phillips Head Screws into the #16 Hi-Red Anchors. Cap the Bottom Pivot Barrel with Bushing.
5. Insert the Pivot Pin (located at the bottom of the Pivot Stile within the Sidelite Panel) into the Bottom Pivot Bushing.
6. Push the Retracting Pin (located at the top of the Pivot Stile within the Sidelite Panel) down until it is aligned with the Retracting Pivot Pin hole (located at the bottom of Header). Let go of the Retracting Pin so it can snap into hole. It may be necessary to lift up the Retracting Pin with a screwdriver so it can fully engage the hole.
7. Fully open and close the Sidelite Panel to check for obstructions. If deemed necessary, adjust the Sidelite Panel by adding or removing (1-3) Washers from the Bottom Pivot.
8. Drill (1) hole at the bottom of Header for the Flush Bolt (located at the top of Strike Stile) to lock into.
9. Secure the Bottom Guide to the bottom of Strike Stile with (2) 1/4" Star Washers and (2) 1/4 - 20 x 3/4" Hex Cap Screws.

3 Install the Slide Door

1. Cover the Sidelite Panel with cardboard on the non-breakout side.
2. Remove each Roller located at the front of Carrier. Refer to the instruction sticker to reinstall each Roller to the back of Carrier.
 - a. Ensure each Roller is horizontally aligned to each other. Please see Figure 1.

Figure 1 Carrier with Rollers

3. Slightly tilt the Slide door to make it easier for the (4) Rollers to 'catch' onto the track.
4. With the Slide Door tilted install the Carrier onto the Track and on top of the Bottom Guide.
5. Adjust the Slide Door in Section "4 Adjustments".

4 Adjustments

4.1 Adjust Height on Slide Door

CAUTION

Do Not rotate the stud counter-clockwise. Doing so will unthread the Axle from the Hanger Roller assembly.

1. Measure the gap between the door and the floor. The gap must be between 3/16" to 7/16" (3/8" nominal).
2. Loosen each Hanger Roller Nut. It is recommended to adjust the (2) Hanger Rollers located at each end of door first.
3. Turn each axle clockwise to raise or lower the Sliding door. Retighten each Hanger Roller nut. Do not overtighten.
4. Loosen each Anti-Rise Roller nut. Turn each axle clockwise until each Anti-Rise Roller almost makes contact with the top of Roller Track. Gap should be about the same thickness of a credit card. Retighten each Anti-Rise Roller nut. Do not overtighten.

4.2 Adjust Preload on Slide Door

CAUTION

Glass must be installed first before adjusting Preload on Slide Door.

CAUTION

When a Preload Block is shifted, it will be necessary to gently tap on one end of the Interface Leg (located inside the Carrier) until it is properly recentered.

1. Support the weight of sliding door. Breakout sliding door approximately 75 degrees. Check for door sag.
2. Go to the Preload Block located inside the Top Rail. Loosen (2) Locking Bolts.
3. Go to the back edge of Pivot Stile. Reduce door sag by tightening the 5/16 inch Adjustment Set Screw with a 5/32 inch Allen Wrench.
 - a. The door should lift without having to be manually lifted.
 - b. Do not allow the Adjusting Set Screw to protrude more than 5/32 inch past the end of stile.
 - c. If an optional 1/2 inch Adjustment Set Screw provided by NABCO is deemed necessary, it could mean the Preload is misaligned. Go to Section 4.3 before replacing the 5/32 inch Adjustment screw.

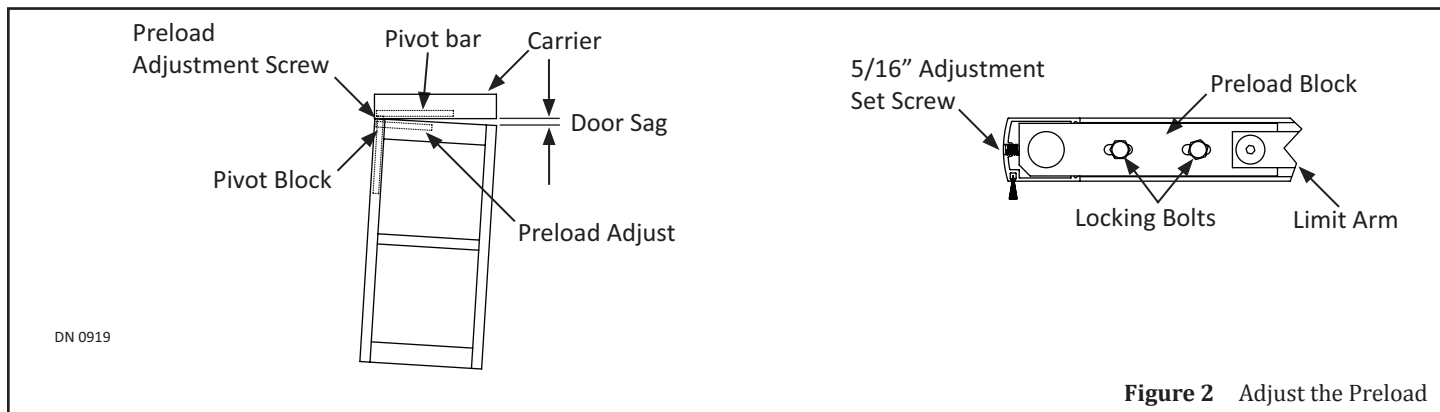

Figure 2 Adjust the Preload

4.3 Correct Preload Misalignment

1. Check to see if misalignment exists on the Strike end of the Door and Carrier.
2. Loosen the Allen head fasteners on the Pivot bar that is located inside the Carrier. Slide the Pivot bar until the door and Carrier are properly aligned.
3. Verify that the Panic Catch inside the Top Rail and the Carrier are still aligned. If not, loosen the 5/16 inch set screw to align the Carrier Panic Catch with the Top Rail Panic Catch.

Figure 3 Correct Preload Misalignment

4.4 Adjust the Nose Caster

Note: Nose Casters are pre-installed for Sliding Doors that are 54 inches Wide (or greater) and/or over 200 pounds.

1. Loosen the #8-32 Set Screw.
2. Position the Wheel so it is perpendicular to the Bottom Rail.
3. Retighten the #8-32 Set Screw.
4. Break open the Slide door. Ensure the Slide door does not scrape the floor. If it does lower the Nose Caster further.

5 Self Close Header

5.1 Wire Components within Header

1. Ensure all power is disconnected at the Junction box and Slide door unit. Inspect the location and grade of all Incoming 120 VAC power cables.
2. Wire the components according to illustration shown below.

Figure 4 Wire the Header Components

5.2 Align the Rotary Damper to the Control Rack

- Loosen (2) #10 Hex nuts that are used to secure the Rotary Damper to the Header. Slide open the door until the Rotary Damper is directly underneath the Control Rack. Slide the Rotary Damper up the slot until the teeth can fit inside the Control Rack teeth. Slide door back and forth to check for binding or chatter.

Figure 5 Fit Rotary Damper into Control Rack

5.3 Attach the Pull Spring to the Carrier

- Close the Slide door. Go to the Shoulder Bolt located between (2) Hanger Rollers closest to the Strike Jamb. Remove the Shoulder Bolt with a 3/16 inch Allen Wrench.
- Attach the Pull Spring to the Shoulder Bolt. Reinstall the Shoulder Bolt with the Pull Spring attached.

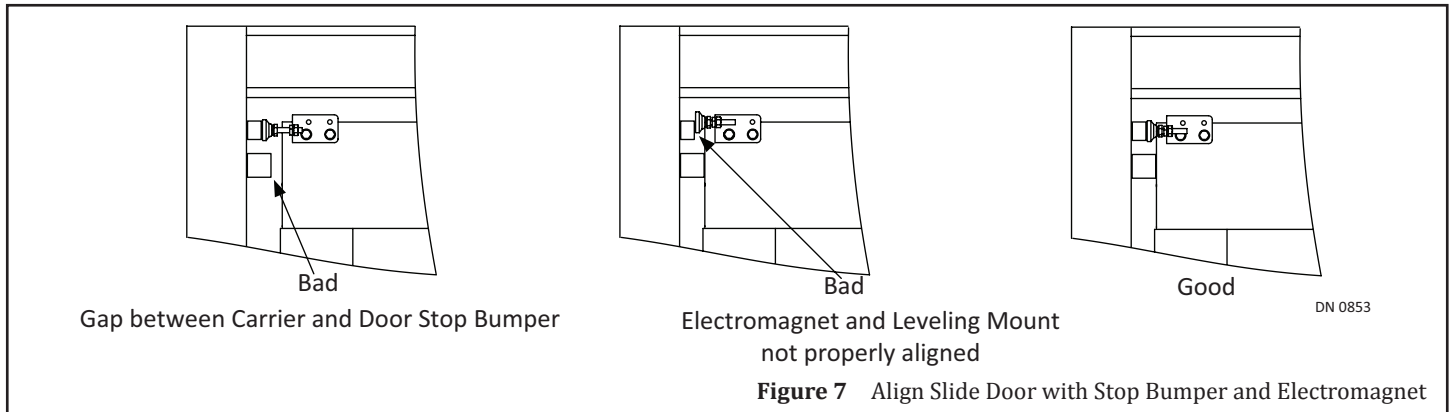

Figure 6 Connect Pull Spring to Shoulder Bolt

5.4 Align Slide Door with Electromagnet and Door Stop Bumper

- Loosen (2) Hex nuts on the Magnetic Strike. Slide the Carrier until it is against the Slide door Bumper.
- While holding the Carrier to the Slide door Bumper, adjust the Magnetic Strike to contact and align with the Magnet on the Jamb Tube. Tighten Hex Nuts.

5.5 Adjust Closing Speed if Slide door does not Fully Close (Self Close Units)

1. Open the Slide door. Allow Slide door to fully close. It should close slowly. If Slide door does not close slowly, go to the Pull Spring. With a Flathead screwdriver turn the Tension plate counterclockwise to increase tension.

5.6 Adjust Closing Speed if Slide door closes Too Fast (Self Close Units)

1. Go to the Pull Spring.
2. With both index fingers carefully push the Tension Bracket forward so the Tension Plate clicks clockwise. This will decrease tension on the Pull Spring.
3. With both thumbs push the Tension Bracket back to starting position. Do not pinch fingers while setting the tension.
4. For more speed control, adjust the Rotary Damper (turn the dial clockwise to increase damping, counterclockwise to decrease damping).

5.7 Fine Tune the Latching Speed

- ▶ To increase Latching speed:
 1. Move the Control Rack farther away from the Strike Jamb Tube.
 2. Adjust the Pull Spring and Rotary Damper after moving the control rack.
- ▶ To decrease Latching speed:
 1. Move the control rack closer to the Strike Jamb Tube. Slide door will move faster before hitting the Control Rack.
 2. Adjust the Pull Spring and Rotary Damper after moving the Control Rack.
